DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on October 29, 2004 has been entered.

Drawings

The drawings were received on August 6, 2004. These drawings are acceptable.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

Art Unit: 1745

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-5, 11 and 26 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-18 of U.S. Patent No. 6,548,210 B1 (hereinafter the '210 Patent). Although the conflicting claims are not identical, they are not patentably distinct from each other because the first layer in the '210 Patent, by virtue of being provided on a nickel hydroxide-based active material layer (equivalent to the instant "intermediate layer"), teaches or at least suggests the instant "coating layer". The first layer is also comprised of cobalt, calcium, and yttrium, *inter alia*, which are readable on the instant Markush group of elements for the coating layer.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. JP 9-199119 teaches a nickel hydroxide battery with an oxide of ytterbium coated as a paste and pressed into the porous nickel body. (par. [0012]) JP 7-201327 teaches a non-sintered nickel hydroxide battery with a calcium hydroxide and cobalt hydroxide coating on the surface of the active material; this coating is disclosed as being in the "particle front face of

nickel hydroxide". (par. [0012], [0015]) JP 7-272722 teaches a nickel hydroxide battery with a calcium hydroxide coating also on the "particle front face". (par. [0006]) The examiner understands the translated "particle front face" as being coating on particles and not the layer-on-layer coatings as claimed.
